Patient died due to reaction,

Date of death

26/01/2021

Suspect Drug

Medicine	Brand	Batch No.	Start Date	End Date	Dosage	Indication	Action taken for reaction	Method	Source
Covid19 Vaccine AstraZeneca	COVID-19 VACCINE ASTRAZENECA	Not known	16/01/2021	-	Dose 1	-	-	-	-

Other information you think might be important, including any other medical condition or allergies that the person might have.

Patient is deceased. First noticed new onset intense headache at 22.40 on 25/01/21. Admitted to ED where CT scan showed multiple areas of intracerebral haemorrhage together with a venous sinus thrombosis. Transferred to neurosurgical center but surgical intervention not possible due to extent of the haemorrhage and the finding of thrombocytopenia (platelet counts between 10 and 15). Taken to ITU but condition deteriorated and was palliated until death on 26/01/21. Was able to provide multiple donor organs with family consent. Patient has not had symptoms associated with COVID-19 Unsure if patient is enrolled in clinical trial

Additional information

See clinical description above. Patient has not tested positive for COVID-19 since having the vaccine Suspect Reactions Please provide details of any relevant investigations or tests conducted: "CT head - 'extensive haemorrhage in right frontal and parietal lobes with mass effect and midline effect."
