

Table 1: UK spontaneous suspected adverse incident report data concerning the interaction of embolization coils/vascular plugs with magnetic resonance imaging (MRI) systems reported to the Yellow Card Scheme up to and including 01.09.2026. The data searches were performed using Global Medical Device Nomenclature (GMDN) Collective Term (CT) Codes CT2480 (Embolization coils), CT2479 (Embolization plugs), CT1777 (Magnetic resonance imaging (MRI) systems) and CT105 (Magnetic resonance imaging (MRI) equipment), respectively.

Report ID	Role Of Initial Reporter	GMDN CT Codes	Clinical Event As Reported (Annex A) Term	Clinical Signs Symptoms And Conditions (Annex E) Term	Health Impact (Annex F) Term
1	Healthcare professional	CT2480-Embolization coils CT1693-Embolization implants	A01-Patient Device Interaction Problem	E2330-Pain	F25-Unanticipated Adverse Device Effect
2	Healthcare professional	CT1121-Neurological surgical devices CT2480-Embolization coils CT1005-Neurological devices CT1693-Embolization implants	A1702-Device-Device Incompatibility	E2311-Discomfort	F10-Inadequate/Inappropriate Treatment or Diagnostic Exposure
